Task : Employee Update Delivery Status

This task is important. It allow employees to update their responsible packet delivery condition. The condition are :

Pending -> Accepted -> Pickup in Progress – Pickup Completed -> In Store -> Delivery in Progress -> Delivery Completed -> Request Completed.

This condition will be used by Manager to track the employee working status and request delivery status. It will be also used to generate pickup and delivery records for customer to track their respective requests history.

The method to complete the function are same as what I used to complete "R2A2 - Sprint 4 Task Manager P&D Request Management" .

Total of 4 controller function : updatepickupstatusnext, updatepickupstatusback, updatedeliverystatusnext, updatedeliverystatusback had create to allow driver update or roll back respective request progress.
